Enhancing the Incorporation of Patient Perspectives in Clinical Trials

Reminders:

- Restrooms: Outside meeting room-Men to the right and Women to the left as you are looking at the stage
- Please turn phones on vibrate or silent
- Please do not personal hotspot as this can interfere with the AV equipment
- This event is being broadcast live- participants will be muted throughout the event

Docket Information

A docket is a repository through which the public can submit electronic and written comments on specific topics to U.S. federal agencies such as FDA. We encourage you to submit your written comments to the docket by May 20, 2019: <https://www.federalregister.gov/d/2019-01826> or go to www.regulations.gov and search for docket number 2019-1826.

Monday, March 18, 2019

Donna Cryer, Global Liver Institute

Monday, March 18, 2019

Session I: Enhancing Awareness & Access

Session I: Enhancing Awareness & Access

Moderator: Pamela Tenaerts, Executive Director, CTTI

Patient Perspectives:

Donna Appell, Hermansky-Pudlak Syndrome Network

Steven Hall, Cystic Fibrosis Patient Advocate

Jamil Rivers, Breast Cancer Patient Advocate

Session I Case Examples

- **Ronnie Tepp**, Principal Investigator of the All of Us Research Program
- **Nancy Roach**, Founder of Fight Colorectal Cancer

March 18, 2019

Reaching, Educating and Engaging Diverse Communities: *All of Us* Research Program Case Study

Ronnie Tepp,
Principal, HCM Strategists

Disclaimer

Mission:

To accelerate health research and medical breakthroughs, enabling individualized prevention, treatment and care for all of us

*Coincident with advancing the science of medicine is a **changing culture of medical practice and medical research that engages individuals as active partners** – not just as patients or research subjects.*

We believe the combination of a highly engaged population and rich biological, health, behavioral, and environmental data will usher in a new and more effective era of American healthcare.

-- Precision Medicine Initiative (PMI) Working Group Report to the Advisory Committee to the Director, NIH, September 17, 2015

All of Us Mission and Objectives

All of Us
RESEARCH PROGRAM

The
Future of
Health Begins
With You

Nurture relationships

with one million or more
participant partners, from all
walks of life, for decades

Our mission

To accelerate health research
and medical breakthroughs,
enabling individualized
prevention, treatment,
and care for all of us

**Deliver the largest,
richest biomedical
dataset ever**

that is easy, safe,
and free to access

**Catalyze a
robust ecosystem**

of researchers and funders
hungry to use and support it

All of Us Research Program Core Values

1. Participation is **open** to all.
2. Participants reflect the rich **diversity** of the U.S.
3. Participants are **partners**.
4. Trust will be earned through **transparency**.
5. Participants will have **access** to their information.
6. Data will be accessed **broadly** for research purposes.
7. Security and privacy will be of **highest** importance.
8. The program will be a catalyst for positive **change** in research.

A Transformational Approach to Diversity

demographics

health status

geography

data types

HCM's framework: The Participant Engagement Journey

- Start at point of relevance
- 'Inside out' strategy
- Digital/non-digital tools and experiences
- Multiple touchpoints

The Value of Participating in *All of Us*

- An **opportunity to learn** some of your own health indicators and get your own data
- An opportunity to **fight disease** and improve the health of future generations
- The opportunity to **ensure that your community is included** in the studies that may lead to new understanding and new treatments
- The opportunity to **be part of a movement** to make our health care more precise, more personal, and more effective

Value is Different for Each Community and Person

- Help improve the health of your children, grandchildren, and future generations
- Ensure that your local community is included
- Learn about your own health
- Choose to access your data
- Learn about additional research opportunities

Right Messenger + Right Tool = Strong Value Statement

- Materials are passive
- People are engaging
- Provide trusted messengers with a variety of tools and they are able to localize a national program to resonate with the target audience

Community & Provider Gateway Initiative (CPGI)

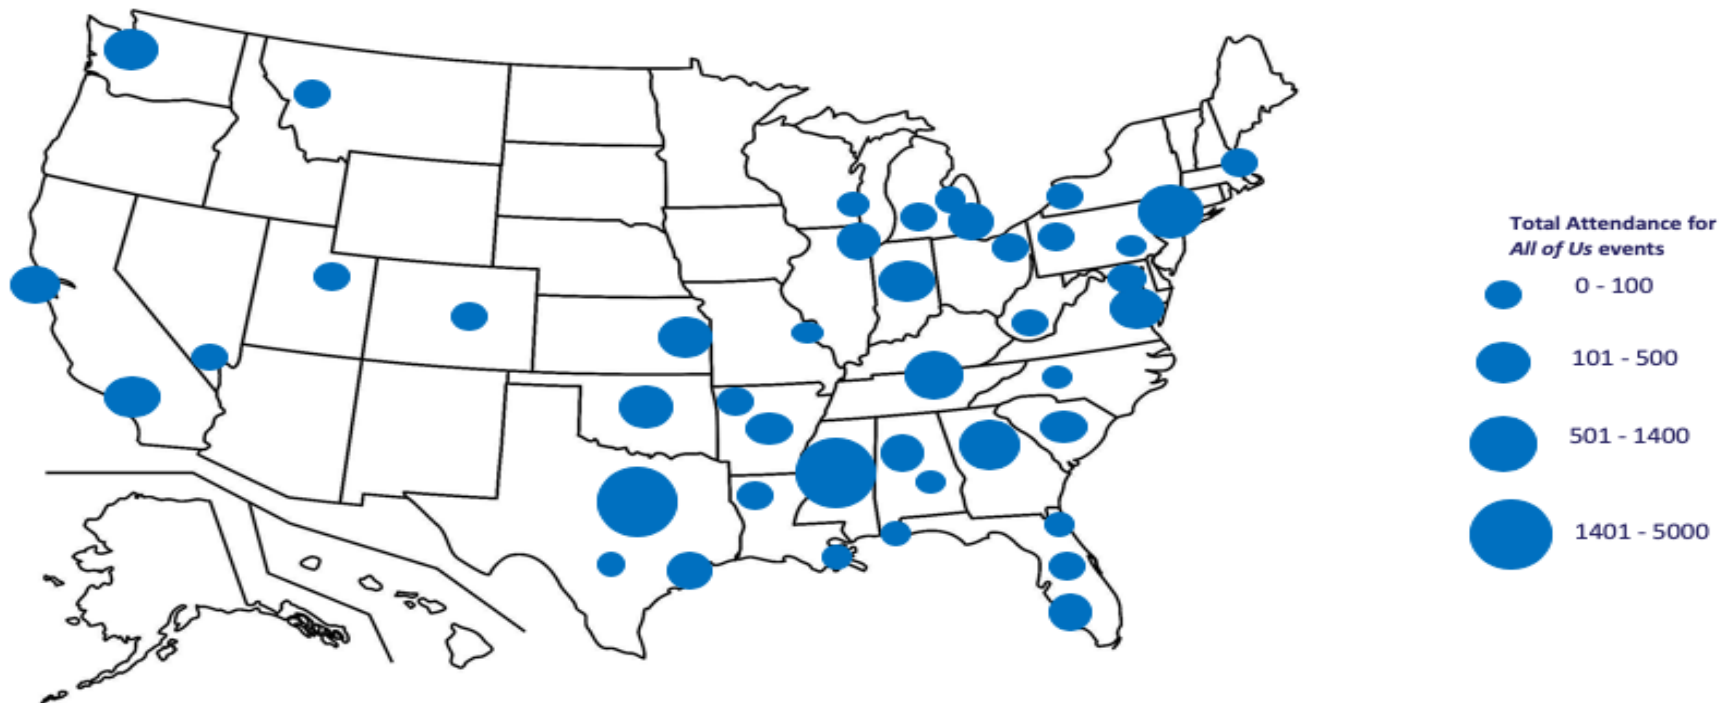

- Network of trusted community messengers who can engage communities in an authentic and impactful way
- Focused on **education and awareness** of *All of Us* within their

CPGI Network (as of February 2019)

Snapshot of activities (August 2018-February 2019)

Generating activity around National launch: May 2018

National Network of Community and Provider Organizations

Since 2016, our team has cultivated relationships with community and provider organizations to garner support for the program at launch and beyond to help increase awareness of *All of Us* and the importance of participating in research in communities across UBR populations.

Types of organizations include:

- Patient/Disease/Research Advocacy
- Community-based
- Minority serving
- Faith-based
- Provider trade associations
- Professional Societies

Activities in Support of Launch *(Non-CPGI, Non-funded, May – July 2018)*

71 Community and Provider organizations completed an activity at launch in support of *All of Us**.

Social Media: **39**

Email distribution: **16**

Blog/website/other: **5**

Webinar: **1**

In-person activity/
meeting presence: **8**

Champions Program: **26**

Key takeaways:

- Don't be confined by traditional stakeholders
- Think creatively about partnerships
- Use a variety of engagement models
- Give your partners space to define value

Row	Saved	Status	Study Title	Conditions	Interventions	Locations
1	<input type="checkbox"/>	Recruiting	A Study of Recombinant Anti-EGFR Monoclonal Antibody in Patients With Metastatic Colorectal Cancer	<ul style="list-style-type: none">• Metastatic Colorectal Cancer	<ul style="list-style-type: none">• Biological: CPGJ602• Biological: Cetuximab	<ul style="list-style-type: none">• Sir Run Run Shaw Hospital Hangzhou, Zhejiang, China
2	<input type="checkbox"/>	Recruiting	Regorafenib in Metastatic Colorectal Cancer	<ul style="list-style-type: none">• Metastatic Colorectal Cancer	<ul style="list-style-type: none">• Drug: Regorafenib	<ul style="list-style-type: none">• Mayo Clinic Rochester, Minnesota, United States• University of Rochester Rochester, New York, United States• University of North Carolina at Chapel Hill Chapel Hill, North Carolina, United States

“As a patient, I had no interest in participating in a trial which had both the highest risk of failure as well as limited long-term benefit, even if the experimental therapy worked as designed. I knew that I may only have one shot at a trial, so I wanted to choose that trial wisely and make that potentially single shot count the most!” – Dr. Tom Marsilje

What does that mean?

- **MSS tumors:** Majority of patients (>95%) who have micro-satellite stable tumors (MSS)
- **No trials in China:** at that point, 4-5 years ago, Tom had concerns about listing trials that most people probably wouldn't be able to access

What does that mean?

- **Highest “potential” chance of benefit:** Chance for a durable response, even if it’s a small chance. Immunotherapy trials* are characterized as highest “potential.”
- **Lowest “potential” chance of trial failure:** Trials can fail due to either safety or lack of efficacy. CRC trials that have advanced to Phase 2 or Phase 3* are characterized as lowest “potential” for failure.
- * means parameters will evolve as science evolves

Utilization since May 2017

- Over 14,000 users have utilized the tools, amounting to nearly 26,000 unique searches.
- Aside from the United States, the countries with patients using the tool the most are the United Kingdom and China.
- Users spend over two and a half minutes per session and navigate between two and three pages each session.

Tom Marsilje, 1972-2017

Thank you to ...

- Maia Walker, the wizard behind the curtain
- FightCRC research advocates who curate
- Flatiron who programmed
- Erika Hanson Brown, the Mayor of Colontown
- Reece Garcia, the FightCRC staff person who juggles (and all the FightCRC staff who believed and helped)

Questions?

- Nancy.Roach@FightColorectalCancer.org

Session I Panel Discussion

- **Donna Appell**, Hermansky-Pudlak Syndrome Network
- **Steven Hall**, Cystic Fibrosis Patient Advocate

Patient Experience Initiative Roadmap

2016

- Assess literature & conduct Patient interviews

2017

- Development of toolkits (P-PET & SPFQ)

Q1 – Q2 2018

- Obtain patient advisor and member company stakeholder feedback and continue toolkit development

Q3 – Q4 2018

- Finalize toolkits and start Member Company pilot testing

Q3 2019

- Update toolkits based on learnings from the pilot and release for public use

TransCelerate Patient Experience Initiative

- *This initiative seeks to develop patient engagement tools will contribute to an improved **partnership between sponsors and patients** in clinical studies.*

AGENDA/CONTENTS

- Introduction to TransCelerate & Patient Experience Initiative overview
- SPFQ Toolkit Elevator Pitch
- SPFQ Toolkit Overview
- SPFQ Toolkit Values Proposition
- SPFQ Toolkit Implementation Overview
- SPFQ Toolkit Action Support

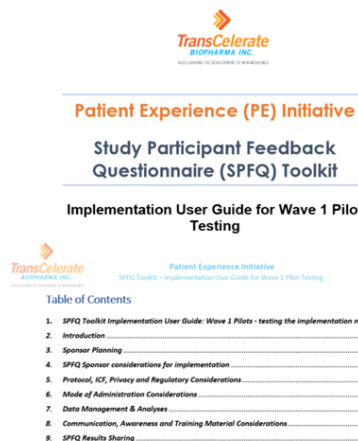

SPFQ Elevator Pitch

The SPFQ is a questionnaire given to patients at the beginning, middle and end of a clinical study so sponsors can improve studies by learning from patients

Developing the SPFQ

1. Identify the purpose of the SPFQ
2. Identify the audience
3. Identify the content
4. Identify the format
5. Identify the distribution channel
6. Identify the timeline
7. Identify the resources
8. Identify the risks
9. Identify the success metrics

Implementation User Guide

SPFQ (Beginning, Middle, End)

Section A: Your experience before you started the study <to be completed within 1 month of study enrollment>

Thank you for your participation. Your experiences in this trial are important to us and we would like to hear about them. Your answers will help us improve future trials. There are no right or wrong answers, and it will take approximately 15 minutes to complete. Your answers will be kept anonymous and will not impact your participation in this trial.

Please select one response for each item.

Strongly disagree	Disagree	Neither agree or disagree	Agree	Strongly Agree
0	1	2	3	4

A1. Understand the treatment process in this trial (for example: when and how to take or use a treatment)

A2. The information given to me before I joined the trial was everything I wanted to know (for example: visits and procedures, time commitment, who to contact with questions)

Section B: Your experience during the trial <to be completed during trial progress>

Thank you for your participation. Your experiences in this trial are important to us and we would like to hear about them. Your answers will help us improve future trials. There are no right or wrong answers, and it will take approximately 15 minutes to complete. Your answers will be kept anonymous and will not impact your participation in this trial.

Please select one response for each item.

Strongly disagree	Disagree	Neither agree or disagree	Agree	Strongly Agree
0	1	2	3	4

B1. Overall, I am comfortable participating.

B2. My trial was as easy for me to understand as I expected.

B3. My trial was as easy for me to follow as I expected.

B4. I was informed when I had completed the trial.

B5. The staff was helpful and friendly.

B6. I am satisfied with my trial experience.

Section C: Your experience at the end of the trial <to be completed at last trial visit>

Thank you for your participation. Your experiences in this trial are important to us and we would like to hear about them. Your answers will help us improve future trials. There are no right or wrong answers, and it will take approximately 15 minutes to complete. Your answers will be kept anonymous and will not impact your participation in this trial.

Please select one response for each item.

Strongly disagree	Disagree	Neither agree or disagree	Agree	Strongly Agree
0	1	2	3	4

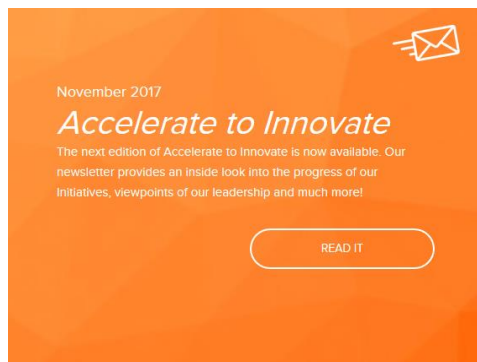

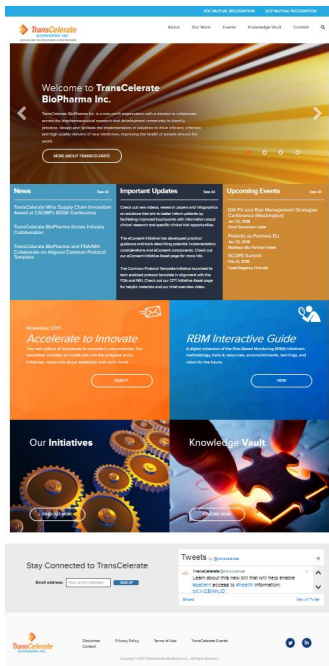

C1. Overall, I was satisfied with the information I received about future support after the trial (for example: follow-up treatment, follow-up contact details).

C2. Overall, I was satisfied with my trial experience.

C3. Compared to when the trial started, the overall experience required was similar to what I expected.

Thank You For Your Input!

Design of Patient Centric Trials

Case Examples: **CoDESIGN** - Eli Lilly and Company

Joseph Kim, Sr. Advisor Patient Experience and Design Innovation
Design Hub Foundations

Disclaimer

The views and opinions expressed in this presentation are those of the individual presenter and do not necessarily reflect the views of the Clinical Trials Transformation Initiative (CTTI) or the U.S. Food & Drug Administration (FDA).

PURPOSE: Ensure Lilly's **Clinical Programs and Trials** are designed to **provide exceptional experiences** for patients & research professionals

MISSION: Utilize the CoDESIGN experience to **understand and appreciate the needs of individual Clinical Programs and Trials** by ensuring trial designs are...

Thoughtfully
supportive of the
patient

Implemented
effectively by
sites

Differentiated
against the market
by payers

Meet the safety and
efficacy thresholds
set by regulatory
bodies

Case Study 1 - Endpoints

■ Endpoints

■ Problem:

- While FDA approved end points might be focused on evidentiary disease progression/modification, measurement of symptomatic relief can be strongly desired.

■ Outcome:

- Patients help us to include these as endpoints based on their feedback

Case Study 2 - Procedures

■ Timing/Volume of Procedures

■ Problem:

- Study team was unsure of number of procedures or the timing between them
- Were they out of sync with the practical realities of the health care system or patient lives?

■ Outcome:

- Through patient and site collaboration, Lilly is often able to uncover these scenarios and have redesigned the schedule of procedures as a result.

Case Study 3 - Invasiveness

- **Invasive Procedures**

- Problem:
 - Invasive procedure proposed in an immunocompromised patient
- Outcome:
 - Patients informed us that this was a non-starter. Protocol changed procedure to “optional.”

Case Study 4 – Drug appearance

- **Drug Appearance**

- Problem:

- Multiple pills involved and they all share a similar look

- Outcome:

- Patients helped to create solutions to help make sense of the different pills and any associated activities

Case Study 5 – IRB perspectives

- IRB perspectives

- Problem:

- Digital health wearable desired as a solution to help patients participate successfully
 - Historically, not viewed favorably by IRBs

- Outcome:

- Lilly collected strong site and patient feedback on better ways to support patients with digital health wearable

Questions

Session II Panel Discussion

- **Melissa Beasley**, Eosinophilic Esophagitis Patient Advocate
- **Len Schwartz**, Parkinson's Foundation
- **Theresa Strong**, Foundation for Prader-Willi Research
- **Mary Elmer**, Director of the Patient, Caregiver and Consumer Experience, Merck. Member, TransCelerate BioPharma

Session III: Post-Trial Communication & Engagement

1. Evolving landscape

- Overcoming challenges and progressing solutions
- Working as part of multi-stakeholder consortia
- Seeking to progress change internally and externally

2. Plain Language Summaries

3. Individual Return of Results

Takeda, Pfizer and others have been partnering over the past five years with various organizations including:

- Harvard Multi-Regional Clinical Trial Center
- TransCelerate BioPharma
- Health Research Authority Task Force on European Union Clinical Trial Regulation
- Layperson Summary Guidance
- Patient Data Access Initiative
- Supporting individual Public-Private Partnerships

Plain Language Summaries

Plain Language Summaries

- Make results accessible to study participants and general audience
- Aggregate results of a single trial written in plain language
- Explain technical terms and complex concepts in simple language

Plain language summaries

EU Clinical Trials Regulation 536/2014 (Article 37) (EU CT Regulation)

**New EU
database once
it becomes
available**

**Annex V
ten elements that
must be addressed
in the lay
summaries**

**Consistency in
the way trial
results are
presented will
be helpful**

Effective from 2020

Working Collaboratively

**MULTI-REGIONAL
CLINICAL TRIALS**

THE MRCT CENTER OF
BRIGHAM AND WOMEN'S HOSPITAL
and HARVARD

- Harvard MRCT*
- MRCT Return of Results Guidance Document, Version 3.1, December, 2017
- Return of Aggregate Results to Participants Toolkit Version 3.1

Draft Plain Language Summary Guidance Document Submitted to FDA, September 2017

- TransCelerate BioPharma Inc.**
 - Recommendations for Drafting Non-Promotional Lay Summaries of Clinical Trial Results EU CTR Task Force and formal Guidance
 - Layperson Summaries of Clinical Trials: An Implementation Guide

Remaining barriers/challenges

- Sponsors need to develop summaries and method of distribution
- Pre-publication concerns— no clear position from journals
- Need for clear FDA guidance
- Role of Independent Review Board (IRB)
- Potential to be seen as promotional

"84% of Investigator/Physicians agree aggregate results should be shared with patients
→ 44% have never shared with study participants"

Harvard MRCT Survey

Return of Individual Results

"I don't think it is just an opportunity - I think it is an obligation - an unmet obligation that pharma disseminate updates on the drug and on your trial."

Patient, US

Understanding the landscape

TransCelerate Survey: Patient Perspective*

Over 3,000 patients
surveyed across 36
countries - 2017

83%

The majority of
patients **want their
lab/test results**

68% want to know
whether they
received study drug
or placebo

Regulatory changes

EU Clinical Trials Regulation
536/2014 (Article 37)
(EU CT Regulation)

Key legislative considerations

HIPAA, CLIA, GDPR,
California Privacy legislation

Return of individual results to participants

Consensus Study Report*

A landmark in the individual return of results space
providing recommendations for the US, July 2018

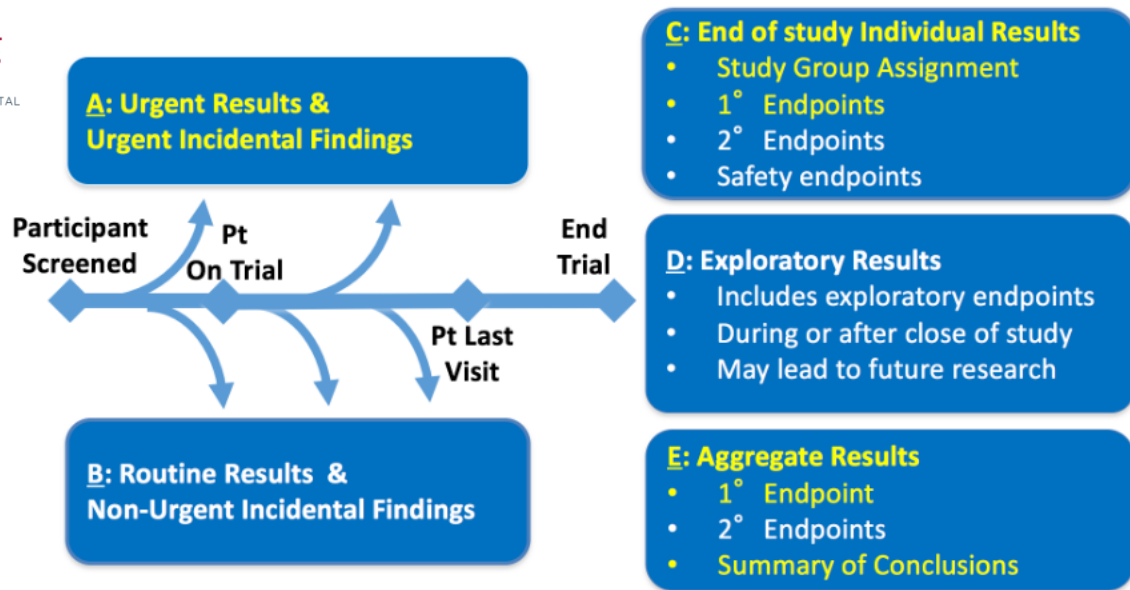

Understanding the value of accessing Clinical Trial Data / Results

Gaining clarity on Individual Return of Results – what & when

■ Harvard MRCT*

- Return of Individual Results to Participants Recommendations Document Version 1.2 (Guidance), November 2017
- MRCT Return of Individual Results to Participants Toolkit Version 1.2 (Toolkit), December 2017

Data types recommended for return, at a minimum, are highlighted in yellow

Working with PDAI

:

To enable trial participants to access their data in a responsible manner that is standardized across pharmaceutical companies.

**A collaboration of
research sponsors
dedicated to the
return of individual
research results**

PDAI - Working to solve the follow-up challenges facing patients, sites and investigators

Patients

Patients surfaced the following pain points regarding post-trial follow-up:

- A desire for **trial results** communicated promptly upon completion of the trial
 - Personal
 - Aggregate
- A desire to know which **trial arm** (experimental vs. standard of care/placebo)
- A greater sense of **closure** and **appreciation** from trial team reflected in clinical trial follow up

Primary Investigators & Nurse Coordinators

Investigators and coordinators mirror patients in the patient request for trial results, however, the following barriers arise:

- Primary investigators and nurse coordinators **often do not know trial results themselves** until they are published
- Trial results, between writing and peer review, **are published a significant amount of time after trial completion**
- Patients often ask what trial arm they were on, however **the study team is often not informed during or after the study**

“Trial results are published and released to the public typically over 1 year after trial completion. At this point, most patients have moved on; Oftentimes we do not know or ever find out trial arm of specific patients.”

— Coordinator, US

Patients are in control

- Protect patient privacy and autonomy by ensuring patients only receive the data they wish to

Responsibly share information

- Return data in a timely manner and withhold only the information needed to maintain trial integrity and comply with regulations

Not just data, information

- Provide context so patients can understand their data

Singular intention

- Create a consistently positive patient experience that remains adaptable to each sponsor's unique context

Seamless sharing

- Minimize burden on sites, investigators and patients

Innovative Medicines Initiative (IMI) – – Health Outcomes Observatories

New platform to empower patients to contribute their outcomes data in a standardized way via digital tools to create transparency of health outcomes for Patients, HTAs and HCPs.

Future focus: Evolving landscape toward Individual Return of Results

- Need for regulatory harmonization
- Address conflict of laws
- Consistency in IRB approach
- Change organizational culture internally & externally
- Develop vendor capabilities
- Further understand patient perspectives
- Conduct pilot studies
- Share learnings and best practices

Recapping Key Themes & Looking Forward

Recapping Key Themes & Looking Forward

Panelists:

- **Michael Kurilla**, Director, Division of Clinical Innovation, National Center for Advancing Translational Sciences, NIH
- **Craig Lipset**, Head of Clinical Innovation, Global Product Development, Pfizer
- **John Wilbanks**, Chief Commons Officer, Sage Bionetworks
- **Peter Saltonstall**, President and CEO, National Organization for Rare Disorders
- **Pamela Tenaerts**, Executive Director, CTTI
- **Theresa Mullin**, Associate Director for Strategic Initiatives, Center for Drug Evaluation and Research, FDA
- **Donna Cryer**, Global Liver Institute (moderator)
